## Commissioning of a modern finished products warehouse

In the second half of 2019, we commissioned a new finished goods warehouse, which is a response to the constantly growing level of production. Its surface allows storage of up to 2880 Euro-pallets. It is served by modern Reach Truck high-lift forklifts, thanks to which it is possible to stack pallets at a height of 10 m. The warehouse is managed by a modern WMS class system.
